

Intro

During the exercises, you are to follow along with a use-case project and by the end of videos, you should have completed every single one. Of course, you can start doing the use-cases after having finished watching the videos.

The videos only show you snippets and how things are done through simple examples but the use-cases will allow you to use what you've learned to do actual work.

Use-cases won't start until after the set up sections.

Good luck!
